

Meeting 1

Concerns

Database

- Several Options
 - MongoDB
 - Non-Relational, easy to use, prior experience, works well with JSON
 - Issues with connections from Lambdas
 - No experience with joins
 - DynamoDB
 - Free with AWS
 - Non-Relational, but not in the same way as MongoDB
 - Not as easy to manage, queries maybe be harder to perform
 - Built to scale for large Data sets, might not be the best for this use case
 - RDS
 - Can use any Relational DB
 - Some experience with Relational DBs
 - queries can get ugly real-quick
 - may still have same connection management issues as Mongo

Evaluation and Goals
